INFRASTRUCTURE

OVAL SURFACE IMPROVEMENTS

Installing and maintaining a healthy, strong turf coverage ensures that oval condition supports football training and matches throughout the season.

The key components of oval development include subbase and soil profiles, drainage and irrigation. Annual site specific maintenance programs ensure the ongoing condition of ovals each season.

Professional advice should be sought for the development of new ovals and can provide value to maintenance programs or any renovation investment.

SANFL works regularly with Living Turf (livingturf.com.au) and Turf Solutions (adelaideoval.com.au/turf-solutions) for advice, reporting and design and works.
